

"I have worked with Web Engineered Systems & Services for several years, and their innovative approach to technical problems is remarkable. I would not hesitate to use WESS again."

**- Mike Dow**  
Cianbro Corporation

"It's not cost-effective in today's economy for a small business like mine to keep software and network engineers on staff. Web Engineered Systems & Services has provided top-notch outsourced services to meet my project needs and keep fixed costs down. The ability of their engineers is second-to-none, they always stay on top of a project, and they are simply great people. I look forward to working with WESS every chance I get."

**- Matthew Cascio**  
The Internet Supply Company, Inc.

"We use Web Engineered Systems & Services as our primary source of programming solutions and Web-hosting projects. Our Web sites are complex and involve managing several thousand clients and revenue transactions each week. WESS has saved us money on the front end and helps us make money every day of the week. In today's environment, that is what matters most."

Web Engineered Systems & Services

**We keep businesses in business.**

# Technology keeps your business running – but only when your systems and programs are working flawlessly.

Your business's underlying IT framework supports just about every single mission-critical process, from the application through back-office systems and the network. When there's a system failure, even a small one, it can be detrimental to your business.

Sometimes even when things seem to be humming along, you may not be using the most efficient systems, and productivity suffers. A system that's under-performing can be just as harmful to your business as a system that's completely down – possibly even more so.

## Our knowledge can work for you

How do you know when your critical IT systems are working at maximum capacity? WESS has the answer. Our team of skilled hardware, software, and process engineers has more than 100 years of combined experience. You can depend on us for the IT and telecommunications services and support you need.

We understand that technology is your competitive edge. That's why our solutions are designed to positively impact your bottom line, ensure continuity of your operation, and help you compete in any economic climate. All the solutions we provide are customized and scalable, so they'll work for you today, then grow with your business tomorrow. Our goal is to keep your systems performing at optimal levels – so you can concentrate on taking care of business.

## It's not just about IT

Besides being engineers who understand the intricate workings of telecom and IT products and processes, we're experienced business people who recognize and appreciate your business problems. We'll listen carefully to you, then work with you to develop effective solutions to your problems. And even though we're "geeks," we're easy to talk to.

## More than you expected – exactly what you needed

When you hire WESS, we'll solve the problem you're struggling with. And if we can't deliver the solution you need, we'll help you find the right person for the job. How many other IT companies can say that?

1,000 sq. ft. data center designed, built, and maintained for a multinational web services company.

## Consulting Services

Our senior engineers can advise you on all areas of information technology and telecommunications. Call us to:

- Evaluate hardware and software
- Research applications
- Recommend telecom options
- Automate your company's workflow

We can implement any solution we recommend and, when needed, provide personnel to act as system administrators and project managers.

## Web Services

We Web-enable applications, design them, and integrate them with services; develop and support intranet, extranet, and Internet applications; and develop dynamic, database-driven Web applications. The WESS team also sets up and manages E-commerce transaction processing.

## Remote Office Connectivity

We can integrate your computer systems from multiple offices through secure VPN so that they function as one network and are accessible from any location, enabling your employees to share applications, files, printers, databases, or an Internet connection.

## Support Services

We provide support services for networks, servers, software, telecommunications, and PCs and other workstations.

We also provide database development, security solutions and audits, and programming in many languages.
